### 3 SIMPLE STEPS TO DRILLING REBAR

#### REBAR PUNCHER SETUP

5/8"-11 Internal Thread

Recommended that you grease the threads.

1. When rebar is encountered while drilling, immediately stop the rotary hammer drill and remove the bit from the hole. (failure to do this will severely damage a carbide hammer bit.)

2. With a rotary hammer rebar puncher mounted in a SDS-PLUS or SDS-MAX drill with the selector in the **rotary hammer position**, insert the rotary hammer rebar puncher into the hole and drill through the embedded rebar.

3. Remove the rotary hammer rebar puncher after the rebar has been drilled completely through and finish drilling the hole with the carbide hammer bit.
